Frozen native continuation approval

DEC-20261016-34a9e9 / GOAL-ISOU-f30a07

FACT: public e82 +94 clean controls + b3/bf0 remote custody

REVIEW: resource/control/trace source joints hold in static scope

APPROVED: exact native protocols; target outcomes remain unmeasured

PENDING: sealed50341 profile → terminal snapshot → M8191 construct/verify

Decision and factual prerequisites

Approve bounded EXP-ISOU-32a530 same-map profile, then separate EXP-ISOU-feb102 compactM8191 instance, concurrency1. Public sourcee82, clean94-pass/0-fail suite, installed-byte equality and remote binary/control custody at crypto8d24802 satisfy preparation gates. Independent predeclared resource/control/trace source retake holds at static scope, correcting the earlier missed zero-RSS condition. Actual model/effort remain unknown. No target result is asserted.

Comparison and planned work

Prior50341 replay was censored at3600019ms. The new profile uses exactly the sealed7656861-byte map and source search/stderr hashes, with no construction. Durable trace records distinguish completed stages from censored activity; core COMPLETED is not public ACCEPTED. Rank this diagnostic first, then compactM8191 construct and fresh independent verify only on constructed/sealed certificate. The reviewed known-CM norm/point source remains unchanged; unreduced expression, exact-Z identity, LL/Cornacchia, derivative/pairing/subgroup/point checks remain mandatory. SEC2p/n are trusted standard primes.

Bounds and limits

Profile3600s, compact constructor1800s, verifier3600s;8GiB sampled worker RSS,25ms interval and100ms monitor grace. These are host-protection bounds, not OS hard limits or monetary caps.2MiB certificate reader and256MiB post-run output admission are explicit; no live disk quota is claimed. Keep every failed, censored and nonstarted attempt. Canonical outer run records must retain actual native outcomes and missing data.

Claim boundary and next action

No new degree admission, speed ratio, global record, finite maximum, novelty, security or prescribed-execution-proof claim. Thin shell receipt adapter preserves native argv and captures raw /usr/bin/time -l public-command OS user/system/real/RSS. This is not per-stage or whole-campaign cost. Independent evidence review follows terminal snapshots; no knowledge promotion now. Canonical score/claim graphs stay unchanged. Parent executes /run TASK-20261016-d481d6 only after published input snapshot TASK-20261016-04c765 verifies; CM follows primary terminal archive and healthy monitoring. Coordinator launches no science.
