EXP-ECDLP-bfbe6f: original native execution observation
RUN-ECDLP-8f5190 GOAL-ECDLP-001 H-ECDLP-cba67a

Observations only. No scientific verdict, hypothesis transition or attack claim is made. One deterministic original worksheet ran; its driver and checker both exited 0. Native schema validation then recorded `invalid_output`.

Recorded execution. Requested 1; driver completed 1; checker completed 1; supervisor-valid 0; invalid-output 1; no recorded timeout.
Commit: `54e902764866793036285e3d4368e483db6bb4cc`
Platform: linux. Python: 3.12.14 (main, Aug 25 2026, 14:00:49) [Clang 22.1.3]. Dirty-tree state and CPU/GPU model at launch were unrecorded.
Memory limit: 256MiB; actual peak RSS and CPU seconds unrecorded.
Derived wall interval: 0.112187seconds from native receipt finish minus start; includes driver/checker/schema processing. n=1; uncertainty unreported; no timing comparison.
Metrics copied from original manifest: {"beyond_matrix": false, "matrix_holds": true, "planted_ok": true}

RUN-ECDLP-8f5190, n=1. One wall interval and no two comparable scientific measurements; therefore a process diagram is used.

Native refusal. manifest.yaml fails the run schema (tools/validate_ledger.py): bad run id None; run missing required field 'id'; run missing required field 'status'; run missing required field 'code'; run missing required field 'environment'; run missing required field 'inputs'; run missing required field 'timing'; run missing required field 'result'; run.code.commit missing (not reproducible); run.code.command missing (not reproducible); run.result.certificate.kind must be one of discrete_log|decomposition|none

Exact inputs. {"curve": "y^2 = x^3 + x + 2", "expected_at_seven": [13, 33, 35, 11, 28, 38], "named_future_run_slot": "RUN-ECDLP-8f5190", "pairs": [[0, 1], [0, 3], [0, 5], [1, 3], [1, 5], [3, 5]], "points": [[0, 17], [1, 2], [3, 14], [5, 3]], "prime": 41, "third_coordinate": 7}

Exact argv (repository root working directory).

```
python3
experiments/EXP-ECDLP-bfbe6f/implementation/run.py
--trial-plan
experiments/EXP-ECDLP-bfbe6f/trial-plan.json
--run-dir
/workspace/crypto-autoresearcher/experiments/EXP-ECDLP-bfbe6f/runs/RUN-ECDLP-8f5190
```

Controls, seeds and missing evidence. The unchanged source checker ran the frozen controls and exited 0; all controls, original seed labels and raw-artifact hashes are in `facts.json` and the original specification. No new sample or re-scoring was introduced. The obsolete manifest lacks a certificate declaration; raw output claims no attack. Schema or checker acceptance alone does not establish execution proof or independent scientific correctness.

Sources and next action. Native receipt: `experiments/EXP-ECDLP-bfbe6f/runs/RUN-ECDLP-8f5190/execution-receipt.json`. Exact provenance, input/control lists and artifact digests: `facts.json`. Fresh separately approved reproduction: EXP-ECDLP-3521b9 / RUN-ECDLP-03ccb4; original predictions stay in-sample calibration. Original failed artifacts stay immutable. No canonical scientific graph is changed.
