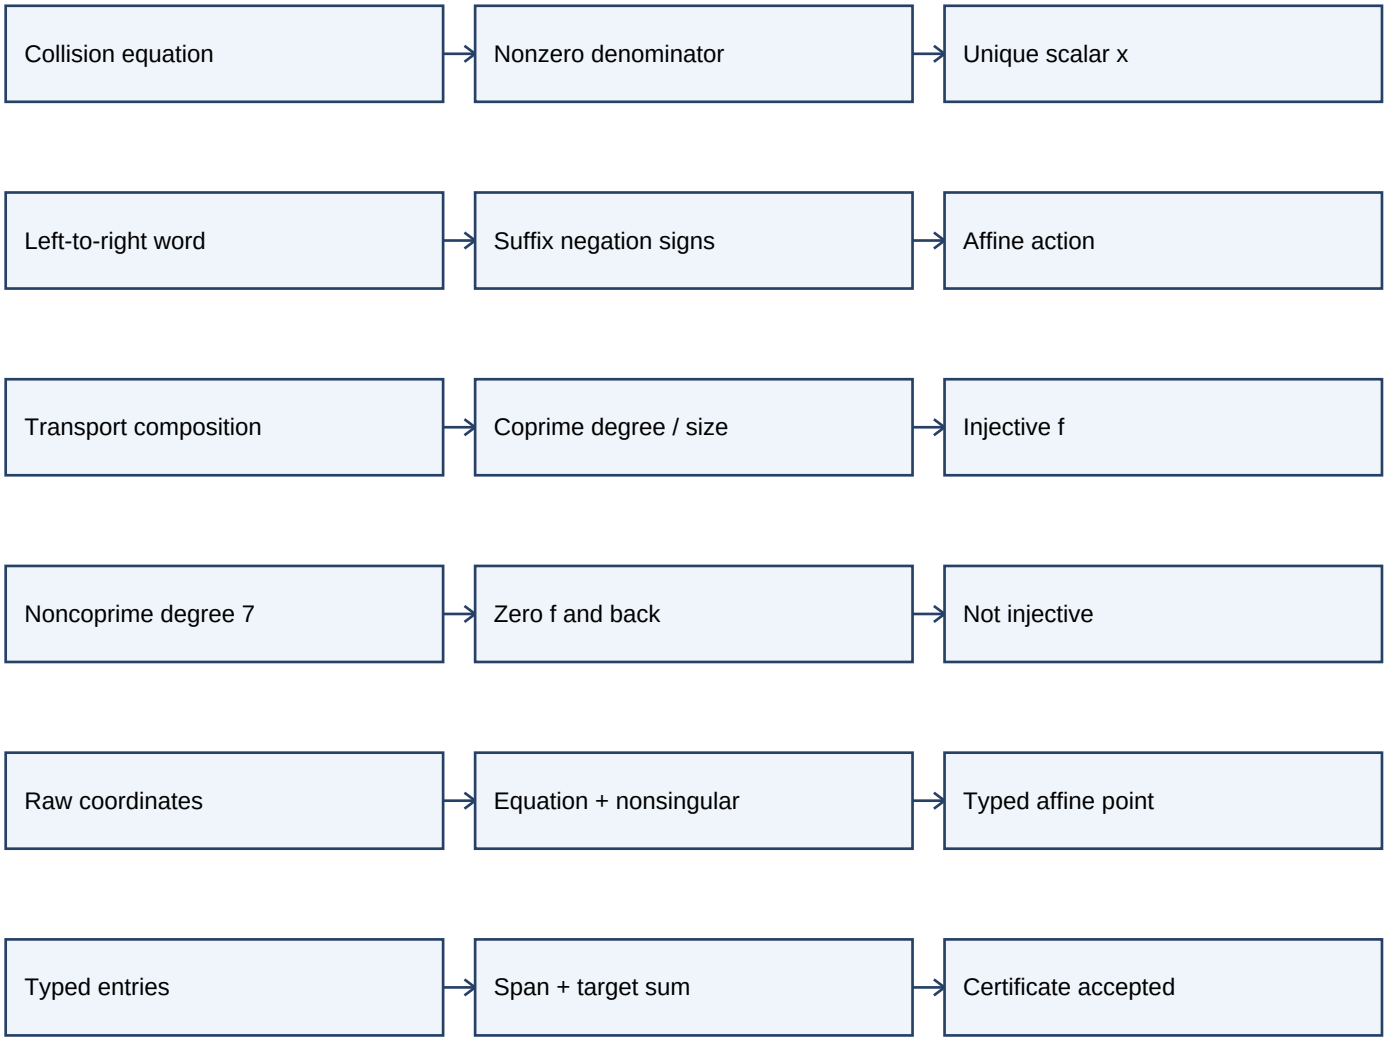
Blind mathematical boundary review

TASK-20261018-29a8c7 / J4-blind-mathematical-boundary

Verdict: holds within the supplied statement-only boundary.

34 kernel-checked theorems; final Lean exit 0; no warnings.

Axioms: propext, Classical.choice, Quot.sound. No producer source read.



Requested examples over F7: ordinary x=4; negated x=4; word result=4.

P=(0,1), Q=(0,6): valid, empty-span x values, P+Q=identity.

Empty tuple accepts identity only. Raw (0,0) is invalid.

Scope limit: unseen producer correctness and commit binding are unassessed.

Full derivations: report.md. Proofs: Controls.lean. Raw check: controls.log.

All failed control sources and logs are retained under artifacts/.
