EXP-ECDLP-84af7b run report

Run report: EXP-ECDLP-84af7b (RUN-ECDLP-18d26b)

This report describes recorded outputs only. It states no verdict, support, weakening or significance; those belong to the evidence review. A failed process is an operational fact, not a mathematical refutation.

What ran

Item	Value
Experiment / hypothesis / goal	EXP-ECDLP-84af7b / H-ECDLP-2f1033 / GOAL-ECDLP-001
Executor task / run id	TASK-20261017-2cc75e / RUN-ECDLP-18d26b
Run directory	experiments/EXP-ECDLP-84af7b/runs/RUN-ECDLP-18d26b/
Command	`g1 --c 13 17 19 31 --dmax 12 --ladder 300 1000 3000 10000 30000 100000 --curves 7 --abelian-controls 3 --random-fields 2 --seeds 1 2 3 --aux-primes 8` (Rust, pari feature off, built with `--locked`)
Host	linux x86_64, 4 cores, 15 GB
Wall time	1366.1 s runner-recorded (measured); supervisor started 21:02:04 and finished 21:25:16 UTC
Trials	1 requested, 1 process completed (returncode 0), 0 failed, 0 timed out
Checker	`check.py` exited 0, `problems: []` (measured)
Supervisor status	`invalid_output`: manifest.yaml fails the run schema, “expected top-level key ‘run’”

The invalid_output status is an output-format impediment. The computation finished, the checker passed, and every artifact is preserved unmodified. The same flat manifest layout is written by the other three SNFS-G runners, so they were not launched; see the session summary.

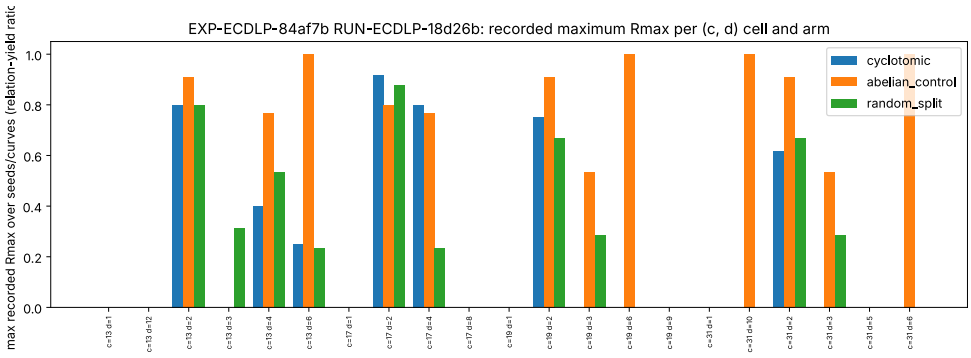

Recorded values

All values are read from raw-result.json. Counts are measured; “max” is the maximum of recorded per-curve values and is derived by scanning them.

Quantity	Value
Cells recorded	2087
Curves recorded	7
Summary keys (c, d)	21
Trace-relation failures total	0
Recorded Rmax rows: cyclotomic / abelian control / random split	441 / 1071 / 553
Largest recorded Rmax, cyclotomic	0.9189 at c=17 d=2
Largest recorded Rmax, abelian control	1.0 at c=31 d=6
Largest recorded Rmax, random split	0.8780 at c=17 d=2

Missing data: summary fields that the runner recorded as null (for example controls at degrees where no control field exists) are shown as absent bars in the graph.

Graph

Maximum recorded Rmax per cell and arm

Figure: RUN-ECDLP-18d26b, n = 21 (c, d) cells, three arms. Bars are the maximum recorded Rmax over the recorded seeds and curves. No new computation beyond that maximum. Drawn by make_graph.py from raw-result.json.
