Native worksheet execution: EXP-ECDLP-324080

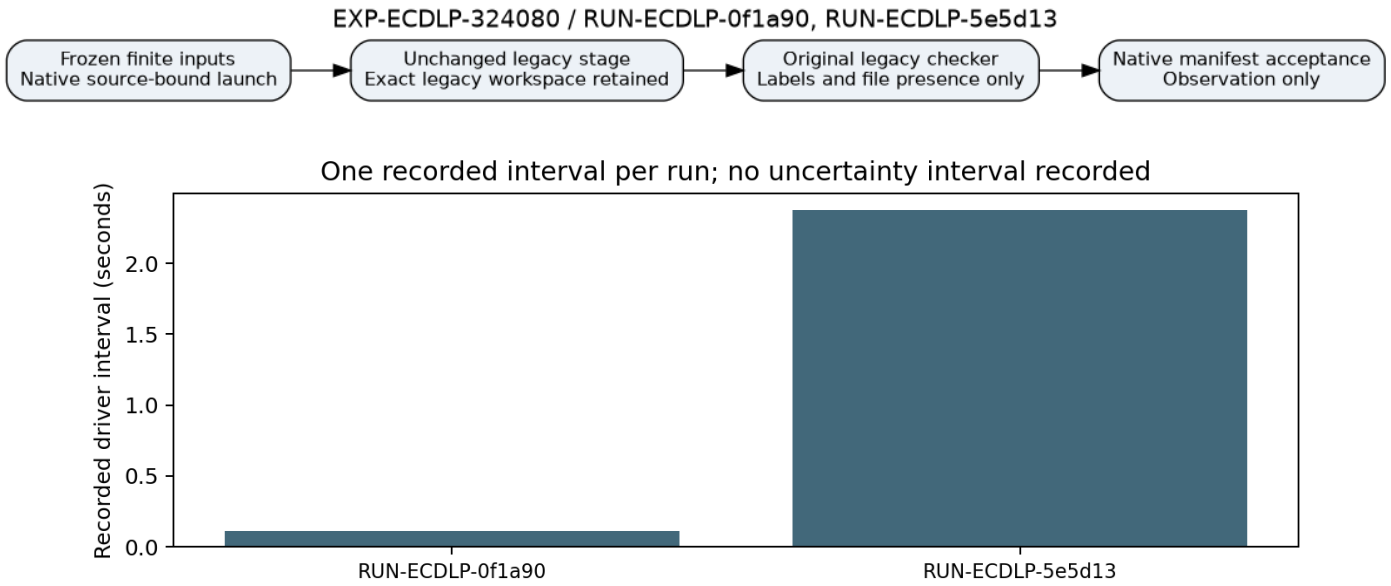

Descriptive finite worksheet observations only; no hypothesis verdict, asymptotic claim or deployed-curve result.

Source experiment: EXP-ECDLP-daee4d. Additive staged metadata reproduction; original specification/code/-plan/queue/approvals and old global paths remain unchanged.. These deterministic readings remain historical in-sample calibration; no ambiguous original criterion is closed or re-scored. Complete lineage hashes remain in report-data.json.

Hypothesis H-ECDLP-b093c1; goal GOAL-ECDLP-001. Requested 2 trials.

Run — Native status — Driver wall seconds — CPU seconds — RSS bytes (floating values displayed to 6 significant digits; full precision retained in report-data.json)
RUN-ECDLP-0f1a90 — output_validated — 0.1085 — 0.072184 — 17301504
RUN-ECDLP-5e5d13 — output_validated — 2.3724 — 2.30202 — 17563648

Recorded values are stage observations only. Native elapsed is derived as finished_at minus started_at; each measured manifest interval and child resource boundary is retained in report-data.json. These are dependent stages, not independent primary arithmetic routes. Actual recorded legacy seeds are [20261007, 20261007]. Canonical certificate kind is none. The unchanged legacy checker verifies outcome vocabulary and file presence only; no independent arithmetic verification or scientific validity follows from native output_validated. Full recorded checker scopes: ['Unchanged legacy checker validates outcome vocabulary and file presence only; no independent arithmetic verification.', 'Unchanged legacy checker validates outcome vocabulary and file presence only; no independent arithmetic verification.']. All legacy outcome labels, including any O-EXCESS, remain instrument observations without independent arithmetic certification or a hypothesis verdict. Timing bars are single process intervals for different stages, not a performance comparison. This is the explicit adjacent nineteenth candidate; historical eighteen membership remains unauthenticated. The authorized outer supervisor environment sets GIT_CONFIG_COUNT=1, GIT_CONFIG_KEY_0=core.preloadIndex and GIT_CONFIG_VALUE_0=false under DEC-20261018-1a5209; exact direct child argv and resource limits are unchanged. The exact outer command style is retained in report-data.json.

Canonical graph scope checked: knowledge/frontiers/ecdlp and the frozen specification. These finite records do not change a scientific status or graph. The pipeline diagram records what ran; the timing plot, where present, plots recorded driver intervals only and claims no speedup.

Complete commands, controls, parameters, code/dirty/environment identities, exact source hashes and raw publication commits are retained in report-data.json and the linked raw runs. Missing data remain null. No result of a control gate is promoted to a hypothesis verdict.

Recorded scalar metrics

```
[
  {
    "run_id": "RUN-ECDLP-0f1a90",
    "scalar_metrics": {
      "legacy_outcome": "SO-FREEZE-OK",
      "legacy_stage": 0
    },
    "structured_metric_fields_retained_in_report_data": [
      "legacy_raw_result"
    ]
  },
  {
    "run_id": "RUN-ECDLP-5e5d13",
    "scalar_metrics": {
      "legacy_outcome": "O-EXCESS",
      "legacy_stage": 1
    },
    "structured_metric_fields_retained_in_report_data": [
      "legacy_raw_result"
    ]
  }
]
```

Structured fields are retained completely in report-data.json and report.md; no truncation or numerical inference changes the raw evidence.
