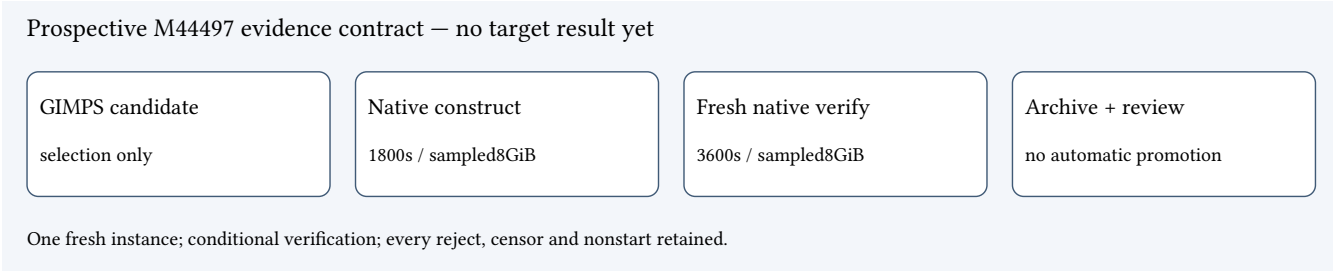
Fresh M44497: bounded native protocol

EXP-ISOU-0c7e60 / DEC-20261016-4c28d0 / GOAL-ISOU-f30a07

Protocol approval only. No target observation or EV promotion.



Observation

the earlier P-192 profile remains CENSORED/TIMEOUT; M8191 construction remains REJECTED and native verification NOT_STARTED. DEC-20261016-30a54b retains both exact outcomes without scientific promotion. No M44497 target has been run.

Comparison

primary GIMPS lists exponent44497 (13395decimal digits), the largest listed exponent within the existing65536bound. Native parsing allows20000decimal digits and a2MiB total certificate. Independent parameter review verifies required44495LL transitions. The source/executable/custody and published94-pass controls are reused unchanged, not rerun.

Inference

approve only a fresh bounded known-CM secp256k1 instance, degree2^44497-1 represented by unreduced coefficients with norm a^2-ab+b^2. Candidate listing is not target admission. Exact constructor certificate, resourcePASS and a conditional fresh independent verifier VERIFIED_COMPACT for the same source/degree are required. SEC2 p/n primality stays trusted-standard.

Limitation

no global-record, expanded-map score, novelty, security or speed claim. Worker sampling25ms with100ms unusable grace is a diagnostic envelope, not an OS hard limit. Output256MiB is a postrun admission bound, not live quota. Preserve all CPU/wall/RSS/partial-output scopes.

Next action

parent Executor alone runs TASK-20261016-6db186 after exact TASK-20261016-61db9a input snapshot verification and Coordinator ownership release. Science concurrency1. Actual first constructor UTC binds a single four-file report covering both run IDs; no invented timestamp. Final producer snapshot binds22paths after report binding, then independent TASK-20261016-4bad89 review.

Independent TASK-20261016-eda340 initially found all three prospective joints hold in packet68d94f2c28. Its original empty blind_from declaration failed the mechanical contract; original files and failure retained. Published addendum c977e36923 widens to seven still-unread final approval/report/producer sources before native reaffirmation. Composed gate passes only after that reaffirmation, without retroactive original-pass claim. Requested xhigh; actual model/effort unknown. No provider substitution or scientific execution. Full sources, exact IDs/hashes and limitations: report.md and PROTOCOL.md. Canonical historical graphs checked unchanged. Source e82; executable b3cbd6ac…61587b.
