Execution details appendix

Status

Observations only. One trial requested and completed; zero failed or timed out. Supervisor status output_validated; process and replay-check return codes both zero. Certificate kind: none. This appendix adds recorded provenance to report.md; no new trial or research review.

Recorded timing

Driver wall time: 0.009882722 seconds. Driver process CPU time: 0.009869388 seconds. Measurement scope: driver arithmetic and raw-result assembly; checker/supervisor costs separate. These recorded times are not a performance comparison. Supervisor and checker CPU/resource totals were not recorded.

Environment and inputs

Experiment EXP-ENDO-854769; run RUN-ENDO-910c24. Platform linux; Python 3.12.14 (main, Aug 25 2026, 14:00:49) [Clang 22.1.3]. Hostname, CPU model and runtime lock were not recorded. Full-tree dirtiness is unknown. Parameters copied from manifest.yaml: {"D_K": [-3, -4, -7, -8, -11, -15, -20, -23], "conductors": [1, 2, 3, 6], "module_primes": [2, 3, 5, 7], "primary_generator_coefficients": [6, 10, 15]}. Seed list: [1729].

Provenance

Immutable run directory: experiments/EXP-ENDO-854769/runs/RUN-ENDO-910c24. Manifest SHA256 d6278bfda20ff82d9eaf8deceafd9dee3e391987aff7965720ebc07dd639b8e3. Exact command and source bindings are retained in manifest.yaml and launch.json. The replay checker is implementation integrity, not independent mathematical validation.
