Sheriff case SHF-20261019-ccc409: ledger/evidence, slice C

Audit record of `ledger/evidence/` in `aburan28/crypto-autoresearcher` at `origin/main` `d0f70c0a09`. It changes no research state, edits no record and applies no downgrade; `recommended_strength` is a recommendation to the Coordinator. Per-record verdicts: `verdicts.jsonl` (348 rows). Sibling repositories `crypto` and `cryptanalysis` are other slices and are not checked out here.

Headline

• **No record reached** `validated`**.** 348 records audited; every one is `validated_with_caveats` or `unvalidated` (8 unvalidated). No record has digests, a cited independent reviewer artifact and a replay or recomputation all at once.

• **Downgrades recommended:** 8 of 39 `strong`, 17 of 88 `replicated`; the 38 `moderate` records use a label the schema does not have (25 map to `replicated`, 13 to `preliminary`); 179 malformed labels need a Coordinator assignment.

• **Independence is the weak joint.** Of 39 `strong` records, 3 cite independent reviewer artifacts; 21 are Coordinator-only or unreviewed; 15 assert independence in prose only.

• **Run records were edited in place** for 5 evidence records (F1), including the `strong` EV-ECDLP-284817 and EV-ECDLP-fd61e4.

• **Counts differ from the brief** (see Census). Where this audit's count differs it is the on-disk count.

Prior

Written before reading any record (`PRIOR.md`). Held: most `replicated` rest on one instrument; `strong` outruns its cited reviewers; `moderate` is schema-invalid; digests rarely declared; the brief's counts do not match. Not anticipated: records cite their evidence by prose path or task id rather than `run_ids` (my first pass wrongly marked 55 such records unvalidated; fixed and disclosed below), and the run-record rewrites.

Census

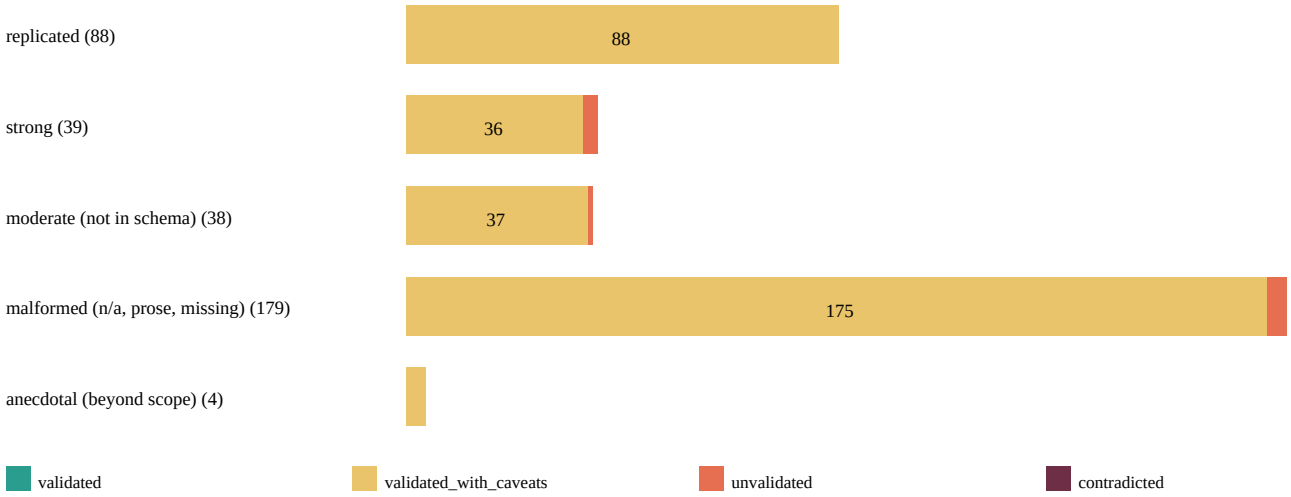
class	brief	on disk	note
replicated	~101	88	
strong	41	39	
moderate	39	38	label not in schema
strength reads n	63	76 read `n/a`	plus 91 other non-enum values (29 long prose), 11 missing, 1 unparsable (malformed total 179)
preliminary	301	299	listed, not audited
inconclusive	123	134	listed, not audited

`anecdotal` (4 records) is a valid schema value that my harness bucketed with the malformed; they were audited and are shown separately. Total audited 348; core scope (replicated+strong+moderate) 165.

Verdicts

class	n	validated	with caveats	unvalidated	contradicted
replicated	88	0	88	0	0
strong	39	0	36	3	0
moderate (not in schema)	38	0	37	1	0
malformed (n/a, prose, missing)	179	0	175	4	0
anecdotal (beyond scope)	4	0	4	0	0

Verdicts by strength label (348 audited)



`validated_with_caveats` is the default when everything cited resolves and nothing failed; it does **not** mean the claim was checked beyond that. Nothing is `contradicted`: the one record I recomputed (EV-ECDLP-284817) reproduces, with a metric-definition caveat.

Per-class checks

class	with run_ids	digests ok / bad / none	independence ok / no / asserted-only
replicated	44	11 / 3 / 74	22 / 5 / 61
strong	22	3 / 0 / 36	3 / 21 / 15
moderate (not in schema)	11	2 / 2 / 34	21 / 7 / 10
malformed (n/a, prose, missing)	39	1 / 0 / 178	54 / 0 / 125
anecdotal (beyond scope)	0	0 / 0 / 4	1 / 0 / 3

`independence_ok` is a cited-artifact check: true only when a non-Coordinator reviewer is named and its report or task resolves on disk. I did not read each reviewer's authorship; instrument and author difference is therefore established for the cited artifacts, not proven. Theoretical records with no review cited are `false`.

Recommended strength changes (not applied)

evidence	claimed	recommended	basis
EV-ECDLP-284817	strong	preliminary	one run, n_eff=8 groups after its own pseudo-replication correction, one instrument, no independent review, and the run record was rewritten in place
EV-ECDLP-81f4d4	strong	preliminary	single run/experiment and no cited independent reproduction: multiple instances not shown on disk
EV-ECDLP-fd61e4	strong	preliminary	single run/experiment and no cited independent reproduction: multiple instances not shown on disk
EV-FALSIFY-2a5e46	strong	preliminary	single run/experiment and no cited independent reproduction: multiple instances not shown on disk
EV-FALSIFY-40291d	strong	replicated	reproduced (>=2 runs/experiments, or this audit's replay passed) but Coordinator self-review only: no cited independent validator or red team
EV-FALSIFY-67150b	strong	replicated	reproduced (>=2 runs/experiments, or this audit's replay passed) but Coordinator self-review only: no cited independent validator or red team

evidence	claimed	recommended	basis
EV-JINV-a8c812	strong	preliminary	single run/experiment and no cited independent reproduction: multiple instances not shown on disk
EV-VOLC-3529e8	strong	preliminary	single run/experiment and no cited independent reproduction: multiple instances not shown on disk
EV-BINSTD-8a1bbf	replicated	preliminary	empirical record with <=1 run, 1 experiment and no cited independent reproduction: nothing on disk shows a second reproduction
EV-CERTBIN-091c56	replicated	preliminary	empirical record with <=1 run, 1 experiment and no cited independent reproduction: nothing on disk shows a second reproduction
EV-CERTBIN-4a9d2f	replicated	preliminary	empirical record with <=1 run, 1 experiment and no cited independent reproduction: nothing on disk shows a second reproduction
EV-CERTBIN-5c9e14	replicated	preliminary	empirical record with <=1 run, 1 experiment and no cited independent reproduction: nothing on disk shows a second reproduction
EV-CRYPTO-ad7fa2	replicated	preliminary	empirical record with <=1 run, 1 experiment and no cited independent reproduction: nothing on disk shows a second reproduction
EV-ECDLP-7e970a	replicated	preliminary	empirical record with <=1 run, 1 experiment and no cited independent reproduction: nothing on disk shows a second reproduction
EV-ECDLP-feb897	replicated	preliminary	empirical record with <=1 run, 1 experiment and no cited independent reproduction: nothing on disk shows a second reproduction
EV-ECRANK-6695dc	replicated	preliminary	empirical record with <=1 run, 1 experiment and no cited independent reproduction: nothing on disk shows a second reproduction
EV-HQC-3a0372	replicated	preliminary	empirical record with <=1 run, 1 experiment and no cited independent reproduction: nothing on disk shows a second reproduction
EV-HQC-469c08	replicated	preliminary	empirical record with <=1 run, 1 experiment and no cited independent reproduction: nothing on disk shows a second reproduction
EV-HQC-4973ff	replicated	preliminary	empirical record with <=1 run, 1 experiment and no cited independent reproduction: nothing on disk shows a second reproduction
EV-HQC-927899	replicated	preliminary	empirical record with <=1 run, 1 experiment and no cited independent reproduction: nothing on disk shows a second reproduction

evidence	claimed	recommended	basis
EV-HQC-e458ef	replicated	preliminary	empirical record with <=1 run, 1 experiment and no cited independent reproduction: nothing on disk shows a second reproduction
EV-SCURVE-44f051	replicated	preliminary	empirical record with <=1 run, 1 experiment and no cited independent reproduction: nothing on disk shows a second reproduction
EV-SSI-0c529c	replicated	preliminary	empirical record with <=1 run, 1 experiment and no cited independent reproduction: nothing on disk shows a second reproduction
EV-SSI-4b17e7	replicated	preliminary	empirical record with <=1 run, 1 experiment and no cited independent reproduction: nothing on disk shows a second reproduction
EV-SSI-7a3e91	replicated	preliminary	empirical record with <=1 run, 1 experiment and no cited independent reproduction: nothing on disk shows a second reproduction

The 38 `moderate` records and the malformed ones are in `verdicts.jsonl` (`recommended_strength`, `strength_ceiling_supported`). Rule: empirical `replicated` needs a second run or experiment or a cited independent reproduction; `strong` additionally needs a cited independent reviewer, else `replicated`. If the Coordinator's policy does not require independent review for `strong`, 2 of the strong downgrades fall away. Theoretical or analytical records keep their label as **unconfirmed**, not endorsed: the derivations were not re-derived here.

Findings (blockers first; none is a blocker)

F1 (major, B7). Run records modified in place after first commit. 5 evidence records cite runs whose result or log files (raw-result, stdout, analysis) changed after they were added (EV-ECDLP-284817, EV-ECDLP-fd61e4, EV-IC-002, EV-JMV-05a150, EV-PMA-fbdd4c); 5 more cite runs with manifest-only edits. AGENTS.md says records are immutable and a defect is superseded by a new run. EV-ECDLP-284817 / EV-ECDLP-fd61e4 cite RUN-SEMAEV-f48dd1-grid, whose raw-results.json and analysis.yaml were rewritten by three commits on 2026-08-07 (metric correction, pseudo-replication correction). The EV-IC-002 edits are the declared duplicate-id repair (CORR-20260802-004).

Would fix: Supersede the corrected runs under new RUN ids and rebind the evidence records through corrections; do not edit the old runs. The Coordinator decides.

F2 (major, B7). Strength vocabulary is not the schema's. schemas/evidence.schema.json allows {anecdotal, preliminary, replicated, strong, inconclusive, contradictory}. 38 records say 'moderate', 76 say 'n/a', 91 carry other out-of-vocabulary values (29 of them long prose, 11 of which read as strong, decisive or replicated), 11 have no strength field and 1 does not parse. The brief counted 63 records reading 'n'; the tree has 76 reading 'n/a'.

Would fix: Coordinator to assign a schema value to each (recommended_strength in verdicts.jsonl gives the ceiling the evidence supports) or amend the enum by decision record.

F3 (major, B7). Most 'strong' labels have no cited independent reviewer. Of 39 strong records, 3 cite independent reviewer artifacts that resolve on disk, 21 name the Coordinator only or nothing, and 15 assert independence in prose without a cited artifact. 8 strong records are recommended down: EV-ECDLP-284817->preliminary, EV-ECDLP-81f4d4->preliminary, EV-ECDLP-fd61e4->preliminary, EV-FALSIFY-2a5e46->preliminary, EV-FALSIFY-40291d->replicated, EV-FALSIFY-67150b->replicated, EV-JINV-a8c812->preliminary, EV-VOLC-3529e8->preliminary.

Would fix: Coordinator to apply or reject the recommended downgrades; independent review is required by AGENTS.md before a claim-changing result.

F4 (major, B7). EV-ECDLP-81f4d4 (strong) cites RUN-ECDLP-8e13c2, which does not exist under experiments//*runs/ (it appears only as* `predecessor_run` *in a later task's manifest); EV-SIG-008 cites five RUN-EXP-SIG-008-* ids that do not resolve.

Would fix: Supply the run records or relabel the evidence as unverified; the audit cannot resolve them.

F5 (minor, B7). EV-HAWK-af783e does not parse as YAML (line 48); EV-XEDN-005 and EV-XEDN-006 are stubs holding only claim_tier. Tools that load ledger/evidence cannot read them or find no strength.

Would fix: Re-record under new ids; records are immutable.

F6 (minor, B7). Digest coverage is thin. Only 22 of 348 audited records have a sha256 declared in a cited run record that could be re-verified; 17 such records verified, 5 did not (EV-CERTBIN-091c56 and EV-ICPERF-433fa5: code inputs changed after the run, bench.py matches neither its declared nor its frozen digest).

Would fix: Declare file digests in run manifests; pin code inputs by commit.

F7 (minor, B8). EV-ECDLP-284817 defines oracle_marginal_ratio as candidates_verified_B / candidates_verified_C. Recomputed from raw-results.json that ratio is 3.108 per group (2.53 pooled); the stated 3.754 +- 3.187 [1.36, 11.237] reproduces only as the mean over groups of per-cell ratios. Direction unchanged.

Would fix: State the metric as mean of per-cell ratios.

F8 (minor, B7). Audit instrument limits, disclosed. (1) The digest walker produced 3 false mismatches (spec/snapshot digests beside file digests), found by hand and overridden. (2) The first replay attempt was void (empty sparse checkout; kept as *_attempt1_void_*). (3) The replay normaliser in scripts/replay.py was defective: it matched 'date' inside candidate_* and 'dir' inside direction and rounded floats to 9 places, so two replays with different candidate data and tiny values normalised equal (found in review of this PR; regression in scripts/test_replay_compare.py). The 3 historical 'pass' rows and the 3 hand re-diffs were all affected. They are preserved as written and are superseded by scripts/replay_strict.py (exact equality, explicit per-artifact metadata allowlist, retained committed/regenerated pairs); the six affected records were re-run with it and all six still pass; the first strict run overwrote two of EV-MONO-d90e9c's pair files (p101/p211 shared basenames, found in review), so that run is partial and EV-MONO-d90e9c rests on a collision-free re-run with its own receipt (shards/replay_strict_pairs_v2/, scripts/verify_pairs.py). Replay covers 6 of 40 sampled records; the other 34 are unknown, not passed.

Would fix: None for the ledger; a re-audit is a new SHF case.

Per-beat results

• **B1 claim inventory:** one claim per label class (C1-C4 in `findings.yaml`); per-record statements are in `verdicts.jsonl`.

• **B2 execution proofs, zk:** n/a; no audited record cites a verifier. Execution proofs are open (docs/execution-proof-chain.md), so nothing here is execution-verified.

• **B3 Lean:** n/a; none of the audited records references a `.lean` file, so `statement_fidelity_ok` is not a Lean check anywhere. It is null except EV-ECDLP-284817 (false, metric definition). Statement fidelity beyond that was not covered for the remaining records.

• **B4 certificates:** `certificate_refs` were checked for existence only; no certificate was re-verified. `recomputed_ok` is null for all records but EV-ECDLP-284817.

• **B5 cost accounting:** not covered (no matched-rho comparison audited).

• **B6 statistics/prereg:** not covered, except the pseudo-replication point inside EV-ECDLP-284817 (n_eff=8 of 40).

• **B7 provenance:** run resolution, digests, immutability from git history; F1-F6.

• **B8 numbers:** a 4+-digit decimal trace (not a recompute) is recorded in each record's notes.

Replay

Seed committed before any replay (`replay_seed.txt`, commit `c958749f69`). Eligible = records whose cited run has `command.txt`: 113. 40 sampled with `random.Random(int(nonce,16)).sample` over the sorted ids. Historical results (Haiku shards `replay_out*.jsonl`, kept as written): {'fail_or_env (historical normaliser, superseded)': 7, 'not_covered (historical normaliser, superseded)': 27, 'pass (historical normaliser, superseded)': 3, 'fail (historical normaliser, superseded)': 3}; the 3 `pass` and 3 `fail` rows were produced with a defective normaliser (see F8) and are superseded. The six records involved were re-run with the strict comparator (`scripts/replay_strict.py`, exact equality, explicit allowlist in `scripts/replay_allowlist.yaml`, committed and regenerated pairs retained in `shards/replay_strict_pairs/` (basename paths; EV-MONO-d90e9c's p101 files were overwritten there, see its NOTE.md) and, for EV-MONO-d90e9c, re-run under collision-free full paths with its own receipt in `shards/replay_strict_pairs_v2/` and `shards/replay_strict_out_mono_v2.jsonl` (`scripts/verify_pairs.py` re-checks the committed side against the audited base blob and recomputes the comparison); discovery output in `shards/replay_strict_discovery.jsonl`): all six pass, differing only in commit, timestamps, platform, python version, elapsed/timing values and a regenerated `preregistered_at`. Timings were not reproduced and are not covered by that pass. `not_covered` dominates the sample because most commands are not a single repo-local python3 script (multi-line, shell, rust, external paths) and 7 failed on environment (absolute scratch paths, missing env vars, a perf meter self-test); those stay unknown. A replay proves nothing about the 308 records not sampled; 40 of 113 eligible gives low power against sparse fabrication.

Division of labour

Haiku 5.5 (`validator-sweep`, frozen command cards, no interpretation): ran the audit harness over four shards, ran the replay shards. Sonnet 5.5 (this session): wrote the harness and composer, re-checked every flag (5 digest mismatches: 3 were instrument false positives, 2 real code drift; 3 replay fails: noise; the run rewrites; the unresolved runs), re-ran the six affected

replays with the strict comparator, recomputed EV-ECDLP-284817 from raw cells, read about 12 records for strength and fidelity, and made every verdict. The first replay attempt was void because my script's sparse checkout failed (`git sparse-checkout init -q`), leaving every row not_covered; the outputs are kept as *`_attempt1_void_`*.

Not covered, and what would cover it

• Re-derivation of metrics for all records except one: needs a per-record recomputation script; start with `ledger/evidence` records citing `raw-result.json` with cell-level data.

• Reviewer authorship and instrument identity: read each cited `validation_report.yaml` / `red_team_report.yaml`.

• Theoretical derivations: independent re-derivation.

• `python3 tools/sheriff.py sweep --target all --deep` (Lean builds, ledger validator, merge hygiene) and the sibling repositories: other slices.

• Replay of non-python commands and runs needing external data or credentials.

• The pending runbook-session audit `RBS-XEDN-a7cd25` (`tools/runbook.py pending-audits`) concerns EXP-XEDN-0c0182; I did not run it, and EV-XEDN-005/006 are stubs that cite nothing.

What this case does not establish

That any record's science is right or wrong. `validated_with_caveats` means the cited artifacts exist and nothing failed, not that the claim was verified. A bounded replay, a zero-hit count or an unread record proves no absence. Recommended downgrades are a reading of the on-disk evidence under the stated rules, for the Coordinator to apply or reject.

Appendix: records listed, not audited

Preliminary (299): EV-AES-048545, EV-ALBIN-001, EV-ALECF-001, EV-ALISO-001, EV-ALPF-001, EV-ALR-001, EV-ALR-002, EV-ARGON-209ece, EV-BGT-816536, EV-BINSTD-01a202, EV-BINSTD-0db227, EV-BINSTD-0e42ac, EV-BINSTD-1a0c8d, EV-BINSTD-1e1815, EV-BINSTD-2a4191, EV-BINSTD-2d34cb, EV-BINSTD-2d41c3, EV-BINSTD-2f89cc, EV-BINSTD-3685c4, EV-BINSTD-375f15, EV-BINSTD-461d48, EV-BINSTD-56c2bc, EV-BINSTD-6298f1, EV-BINSTD-66a996, EV-BINSTD-671f89, EV-BINSTD-71eabe, EV-BINSTD-769c7c, EV-BINSTD-78ca0d, EV-BINSTD-7b4373, EV-BINSTD-7eacca, EV-BINSTD-813422, EV-BINSTD-8b7f33, EV-BINSTD-8edd9b, EV-BINSTD-91ea96, EV-BINSTD-93aee1, EV-BINSTD-95f692, EV-BINSTD-a894c0, EV-BINSTD-b4e120, EV-BINSTD-c3d1c5, EV-BINSTD-c45564, EV-BINSTD-d3a6be, EV-BINSTD-e9b8ff, EV-BINSTD-f0a4ab, EV-BINSTD-f1d8e2, EV-BINSTD-f541ea, EV-BINSTD-fba851, EV-BINSTD-fe3b64, EV-BND-4b8a88, EV-BND-bf659a, EV-CERTBIN-2b8da1, EV-CERTBIN-383c07, EV-CERTBIN-5c2947, EV-CERTBIN-691499, EV-CERTBIN-6c3e0a, EV-CERTBIN-db7f15, EV-CERTBIN-f218ae, EV-CRYPTO-001, EV-CRYPTO-002, EV-CRYPTO-003, EV-CRYPTO-004, EV-CRYPTO-005, EV-CRYPTO-006, EV-CRYPTO-007, EV-CRYPTO-008, EV-CRYPTO-009, EV-CRYPTO-010, EV-CRYPTO-011, EV-CRYPTO-012, EV-CRYPTO-013, EV-DEP-001, EV-DIFFP-b878aa, EV-DREG-004, EV-DREG-006, EV-DREG-007, EV-DREG-008, EV-DREG-4500cd, EV-DS-001, EV-DS-002, EV-DS-003, EV-DS-004, EV-DS-006, EV-DS-007, EV-DS-008, EV-DS-009, EV-DS-010, EV-ECDLP-004, EV-ECDLP-005, EV-ECDLP-006, EV-ECDLP-007, EV-ECDLP-009, EV-ECDLP-011, EV-ECDLP-012, EV-ECDLP-013, EV-ECDLP-014, EV-ECDLP-015, EV-ECDLP-016, EV-ECDLP-2e9680, EV-ECDLP-3dc2db, EV-ECDLP-5035ed, EV-ECDLP-60e266, EV-ECDLP-65b004, EV-ECDLP-6783b8, EV-ECDLP-6a4ebc, EV-ECDLP-6bdff6, EV-ECDLP-6e79be, EV-ECDLP-855daf, EV-ECDLP-921b5d, EV-ECDLP-9d41e7, EV-ECDLP-b3e847, EV-ECDLP-ce9b50, EV-ECDLP-f5c698, EV-ECDLP-f6b3f5, EV-ECDLP-f83a17, EV-ECQ-d9ffe6, EV-ECTD-001, EV-ECTD-002, EV-ECTD-14f9a2, EV-ECTD-8c098d, EV-ENDO-118b3a, EV-ENDO-545cfd, EV-ENDO-7628a0, EV-ENDO-eb58c4, EV-ENDO-fb5823, EV-EQD-001, EV-FAEST-001, EV-FAEST-002, EV-FCP-001, EV-FCP-002, EV-FCP-003, EV-FIND-002, EV-FIND-003, EV-FROB-576872, EV-FROB-b6e1e9, EV-GOAL-DREG-001-B003, EV-HQC-163374, EV-HQC-67a6ec, EV-HQC-75c05b, EV-HQC-7e4b28, EV-HQC-9a30d3, EV-HQC-b71230, EV-HQC-bfb257, EV-HQC-db1fd9, EV-IC-001, EV-ICEX-001, EV-ICI-0bdaaa, EV-ICINV-343679, EV-ICINV-8afb64, EV-ICINV-c68f13, EV-ICPERF-988da7, EV-ICPERF-a8080e, EV-INSTR-600710, EV-INSTR-acb893, EV-INSTR-ffbb5a, EV-MGD-001, EV-MLDSA-56e35b, EV-MLDSA-faf2ec, EV-MLKEM-001, EV-MLKEM-002, EV-MLKEM-003, EV-MLKEM-004, EV-MLKEM-011, EV-MLKEM-012, EV-MLKEM-013, EV-MLKEM-014, EV-MLKEM-015, EV-MLKEM-016, EV-MLKEM-017, EV-MLKEM-019, EV-MLKEM-021, EV-MLKEM-09d715, EV-MLKEM-0cf1df, EV-MLKEM-26cf46, EV-MLKEM-2e668d, EV-MLKEM-553b83, EV-MLKEM-5a8ec5, EV-MLKEM-890e2a, EV-MLKEM-94c773, EV-MLKEM-94f036, EV-MLKEM-c47a1e, EV-MLKEM-c50030, EV-MLKEM-ce1884, EV-MLKEM-eac95b, EV-MLKEM-ee220e, EV-MONO-001, EV-MONO-002, EV-MONO-1ef611, EV-MONO-a0a89c, EV-OIFP-105ac9, EV-PEC-2e67ff, EV-PEC-857664, EV-PFDR-1faf10, EV-PFDR-55d067, EV-PFDR-ad6274, EV-PFDR-d90ccd, EV-PFDR-f6b76c, EV-PSEUDO-066646, EV-PSEUDO-28f914, EV-PSEUDO-35bcc3, EV-PSEUDO-417718, EV-PSEUDO-65a7ea, EV-PSEUDO-6b3146, EV-PSEUDO-a7f625, EV-PSEUDO-dab370, EV-PSEUDO-dd0c51, EV-QSP-3bcfa9, EV-RELN-001, EV-RELN-ed92ff, EV-SDEG-001, EV-SEMAEV-001, EV-SEMAEV-1e67f2, EV-SEMAEV-473ea1, EV-SEMAEV-47d130, EV-SEMAEV-4857cc, EV-SEMAEV-5d7580, EV-SEMAEV-6ef060, EV-SEMAEV-94f6d5, EV-SEMAEV-95eebe, EV-SEMAEV-b3db54, EV-SEMAEV-e8ae55, EV-SEMBIN-0c8bf4, EV-SEMBIN-36f27d, EV-SEMBIN-4614e7, EV-SEMBIN-71e5cd, EV-SEMBIN-c59cfb, EV-SEMBIN-d1cf99, EV-SEMBIN-d40877, EV-SIG-009, EV-SIG-010, EV-SSI-001, EV-SSI-002, EV-SSI-003, EV-SSI-004, EV-SSI-005, EV-SSI-006, EV-SSI-007, EV-SSI-008, EV-SSI-009, EV-SSI-010, EV-SSI-011, EV-SSI-012, EV-SSI-013, EV-SSI-014, EV-SSI-015, EV-SSI-016, EV-SSI-017, EV-SSI-018, EV-SSI-019, EV-SSI-020, EV-SSI-021, EV-SSI-022, EV-SSI-023, EV-SSI-024, EV-SSI-025, EV-SSI-026, EV-SSI-027, EV-SSI-028, EV-SSI-029, EV-SSI-030, EV-SSI-031, EV-SSI-032, EV-SSI-033, EV-SSI-034, EV-SSI-035, EV-SSI-036, EV-SSI-037, EV-SSI-038, EV-SSI-039, EV-SSI-040, EV-SSI-041, EV-SSI-042, EV-SSI-0a57ab, EV-SSI-0eb0b1, EV-SSI-17c854, EV-SSI-1a95bc, EV-SSI-3d46eb, EV-SSI-59f7a2, EV-SSI-804e09, EV-SSI-8aaad0, EV-SSI-b7c3a1, EV-SSI-d4e892, EV-SSI-d9d1a4, EV-SSI-fcda7e, EV-SSIQ-0fc992, EV-SSIQ-3efbe0, EV-SSIQ-48d274, EV-SSIQ-69ba8b, EV-SSIQ-a64d92, EV-SSIQ-c3df82, EV-SSIQ-e43afd, EV-STR-002, EV-STR-003, EV-STR-004, EV-SUBRES-001, EV-SYMF-d46055, EV-WESO-ea9525, EV-XOR-d84f2b, EV-YIELD-7c3195, EV-YIELD-ca4b02, EV-YIELD-e1adbf
