F5 second-pass preparation

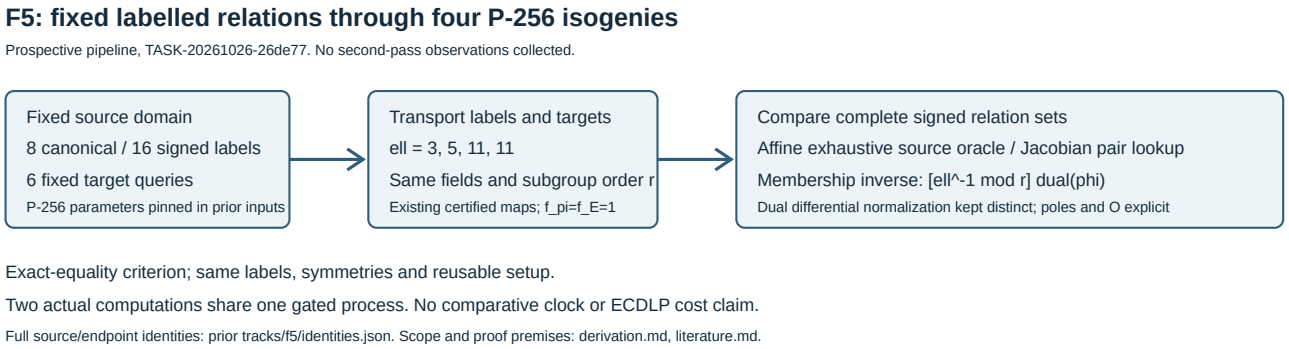

Figure 1: Editable study diagram; exact scope and evidence paths appear in the report.

26 October 2026. Task TASK-20261026-26de77 is prepared for a frozen exact panel. No second-pass arithmetic panel or pilot has run. Experimental execution awaits root's exact Phase B release, the committed frozen protocol and the successful real S3 checkpoint gate.

The proposed panel uses all four prior P-256 maps (degrees 3,5,11,11), eight canonical source points, sixteen signed labels and six targets. Three targets are constructed correctness controls, two use a fixed hash-to-point law, and one is O. Each complete source relation set is compared with the same labelled endpoint set. Membership, inverse transport, geometric pole certificates and a coordinate-isomorphism control are retained separately.

Two actual algorithms are exported: the exhaustive affine source oracle and the endpoint/Jacobian pair lookup. Their shared setup and unequal work scopes preclude a method-cost comparison. No natural yield or scaling inference is planned. See derivation.md, literature.md, protocol.draft.json and the root-owned execution gates for exact assumptions and controls.

Future commands, from the repository root, after root releases the exact source/protocol/checkpoint identities:

```
python3 -B research/p256_factor_base_parallel_20261026/tracks/f5/run.py --out
research/p256_factor_base_parallel_20261026/tracks/f5/runs/run-01 --seed 2026102605 --release
research/p256_factor_base_parallel_20261026/runtime/releases/TASK-20261026-26de77.json
python3 -B research/p256_factor_base_parallel_20261026/tracks/f5/export.py
research/p256_factor_base_parallel_20261026/tracks/f5/runs/run-01 --out
research/p256_factor_base_parallel_20261026/tracks/f5/export-run-01.json
python3 tools/experiment_protocol.py check-export
research/p256_factor_base_parallel_20261026/tracks/f5/export-run-01.json --protocol
research/p256_factor_base_parallel_20261026/tracks/f5/protocol.json --verify-files
```

The proposed data will support fixed-domain exactness observations only. All failure paths retain their output directory. No result, flow or current PDF is fabricated before data. Root owns final report rendering and the PR.
