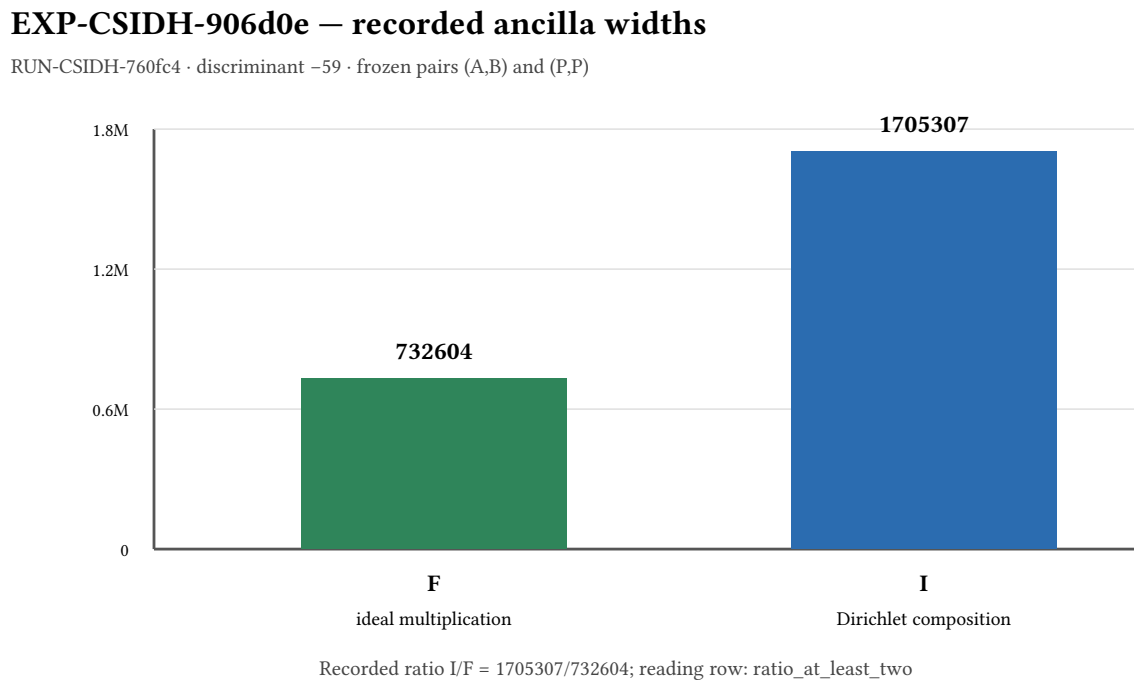
EXP-CSIDH-906d0e execution report

Observation-only record for `RUN-CSIDH-760fc4` (ancilla-ratio-frozen-cell).

Scope and disposition

The supervisor returned `output_validated` and the independent checker returned code 0. This report does not change the hypothesis, experiment, or goal status.



Frozen inputs and custody

- Experiment: `EXP-CSIDH-906d0e`; trial: `ancilla-ratio-frozen-cell`; run: `RUN-CSIDH-760fc4`.
- Plan SHA-256: `d42d49a15c1d11d4f55e4cfac4c127ea927d60e74710507c53a47d78c478dfd3`.
- Execution checkout: `5a926654419a261409b03e4ab85e5f7d260ea3a9`.
- Dispatch-plan SHA-256: `763e9c9712275540a288360f0738230a82326554b44821fe876182e892fa731b`.
- Owner and lease: `executor-csidh-906d0e`, epoch `1`.
- Container: `crypto-ci-python:20261008`; network disabled.
- Receipt: `returncode: 0`; checker: `check_returncode: 0`; status: `output_validated`.

Recorded observations

The recorded widths were `width_F = 732604` and `width_I = 1705307`. The exact recorded ratio was `1705307/732604`; the producer also recorded decimal field `2.327734`. The reading row was `ratio_at_least_two`.

Both frozen pairs agreed. Principal/reference checks, width and ancilla accounting checks, and both discriminant `-60` refusal controls passed. The producer recorded `attack_claimed=false`. The checker printed:

```
check ok: row ratio_at_least_two, width_F 732604, width_I 1705307
```

Interpretation boundary

These are the recorded widths and controls for one discriminant, one encoding, two frozen input pairs, and the named circuit construction. They do not by themselves establish an end-to-end implementation advantage, an ECDLP cost reduction, a quantum resource bound beyond this cell, or behavior at another discriminant or encoding. All raw outputs and supervisor records remain under the run directory.
