Recorded Prym geometry census

EXP-ECDLP-da4ba3 / H-ECDLP-9e7a19 / GOAL-ECDLP-001

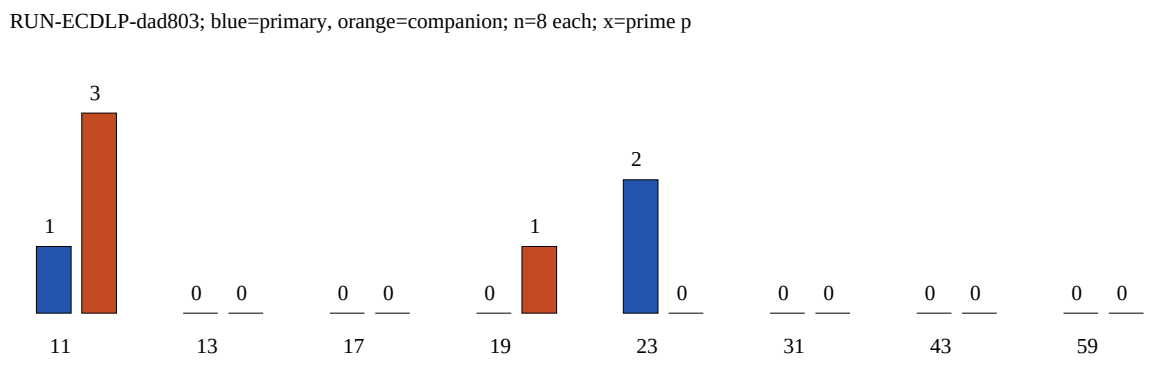
RUN-ECDLP-dad803: observations only; no scientific verdict or ECDLP claim.

One trial requested and completed; zero failed or timed out. Independent checker passed: 128 covers and 24 synthetic controls; zero failed checks.

Clean producer revision e2442834348a7ff60ee50c4618268555d0d5f2fc. Exact command, fixed input hashes, dependencies and host: immutable run manifest/environment.

Measured producer: wall 2.040924355 s, CPU 2.059629574 s, peak RSS 53,055,488 bytes. Checker: wall 0.500340244 s, CPU 0.499568460 s, peak RSS 50,208,768 bytes.

Graph: exact recorded overlaps, n=8 covers per arm per prime. Derived totals: primary 3/64; companion 4/64. No sampling intervals; finite census.



Both field degrees and enumeration orders agreed with independent counts. F43 (0,1) is calibration. The 128 covers are a new catalogue, unrelated to the unsourced historical 32-cover quotation.

Fp/Fp2 certify two genus-3 traces only. No independent complete genus-3 Frobenius certificate, Jacobian map, subgroup action, relation-generation or recovery result.
