Native execution report: EXP-ECDLP-f34097

Descriptive operational observations only; no scientific verdict or attack claim.

Run RUN-ECDLP-62ec3d; hypothesis H-ECDLP-af796a; goal GOAL-ECDLP-001.
Raw archive abe8d1d21d27eb1083ff9bc4647c19912c607f24; execution commit fc3365ccc7715963e041cd4c83fef948e131f2b3.

Requested 1 trial; driver and original checker each exited 0. Native output_validated 0, invalid_output 1, timed out 0. Native elapsed 0.115407 seconds is derived as finished_at minus started_at. CPU seconds, peak RSS, dirty state, detailed CPU model and a canonical certificate were not recorded. The 256 MiB limit is a ceiling, not measured memory use.

The missing canonical fields are code, environment, inputs, timing and result; the exact native reason is retained in report-data.json. The original checker accepted the emitted worksheet shape, then the supervisor rejected the manifest envelope. The run remains immutable and cannot be rerun in this slot. This process outcome is not a mathematical refutation.

One deterministic toy fixture was measured, with no uncertainty interval or sampled inference. Raw timings use the original driver's local boundaries and are not end-to-end performance comparisons. No scientific certificate, security-bit estimate, asymptotic claim or deployed-curve conclusion follows. A later approved successor would have its own identity and observations.

Canonical graph scope checked: knowledge/frontiers/ecdlp and this experiment's frozen specification. No scientific graph content changes follow from a legacy manifest rejection. The pipeline diagram shows the execution and stopping point because there is one fixture and no pair of comparable performance arms.

Exact supervisor/driver/checker commands, source/spec hashes, whitelisted environment and native rejection detail are retained in command.json and report-data.json. Seed: deterministic fixture; no random draw or seed recorded. Sources: ../../runs/RUN-ECDLP-62ec3d/execution-receipt.json, launch.json, environment.json, manifest.yaml, raw-result.json and RESULTS.md.

Recorded worksheet fields (unchanged)
