EXP-ECDLP-2535ec run report

Observation-only record for RUN-ECDLP-b2d284

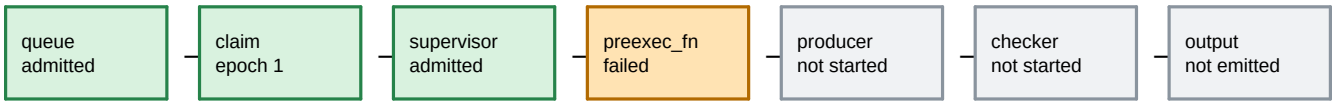
This report records the supervisor path and its sealed infrastructure receipt. It does not assign evidence strength, change the hypothesis or experiment state, or interpret a scientific outcome.

Scope and custody

Goal GOAL-ECDLP-001; question RQ-ECDLP-002; hypothesis H-ECDLP-bd1572; experiment EXP-ECDLP-2535ec. Successor plan SHA-256: 2e9841e4fc754b4b5898bc1a1794eabd54d9ff468b2b188cfee3a90e689f74ae. Correction CORR-20261011-d20976; queue BATCH-1adefe; task TASK-20261011-a71042; claim owner executor-ecdlp-2535ec, epoch 1. Run-record commit: 111d82295f.

Trial accounting

One trial was requested, zero completed, one stopped during infrastructure setup, and zero timed out. The supervisor loaded the plan, admitted the claim, and created the run receipt. It recorded status infrastructure_error with detail *Exception occurred in preexec_fn.* while installing the declared address-space guard. The producer and checker did not start.



RUN-ECDLP-b2d284 execution pipeline; green = reached, amber = infrastructure stop, gray = not reached.

Command and parameters

PYTHONPATH=. python3 tools/experiment_execution.py run --plan experiments/EXP-ECDLP-2535ec/trial-plan-v2.json --owner executor-ecdlp-2535ec --epoch 1

The producer command declared d={3,4,5}, bits={30,40}, A={150,300}, B_s={512,2048}, and seeds {1,2,3}. These are requested parameters, not measured values.

Measurements and controls

No measurement rows, sample counts, arm yields, controls, manifest, or raw-result.json were emitted. Therefore no quantitative plot or uncertainty calculation is present. The editable visual data are in graph-data.json and the corresponding SVG is graph.svg. The recorded host was Darwin with Python 3.12.8; CPU time, hostname, and a runtime lock hash were absent and remain missing.

Interpretation boundary

The run is operationally incomplete. This report records that boundary only; scientific interpretation belongs to a later independent review/archive task.
