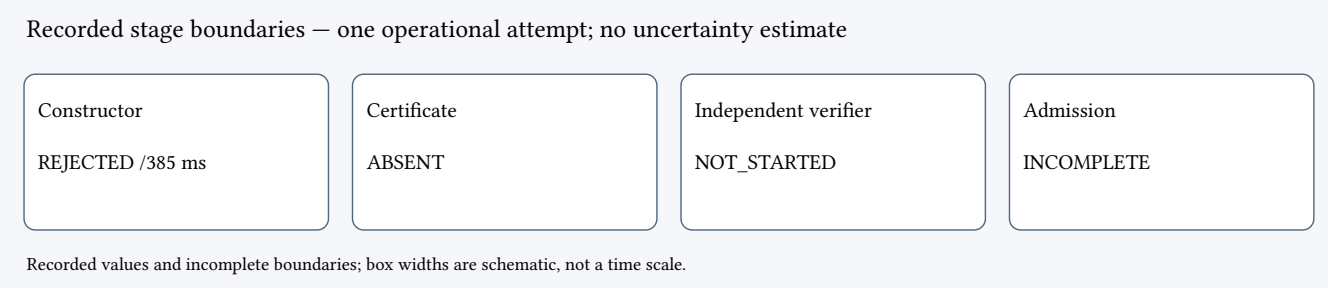
M8191 compact attempt: independent review

EXP-ISOU-feb102 / DEC-20261016-30a54b / GOAL-ISOU-f30a07

Decision: revise the process. Evidence strength: bounded diagnostic. Claim tier: process revision; no EV promotion or lane closure.



Observation

constructor RUN-ISOU-bdbf5d recorded REJECTED with a preserved nonzero Lucas-Lehmer terminal. No certificate was emitted. Native worker385 ms; inner arithmetic record372 ms; sampled peak RSS2,932,736 bytes, zero unavailable samples. Dependent RUN-ISOU-2b2372 is NOT_STARTED with construction_not_passed_or_certificate_hash_changed.

Comparison

the frozen verifier gate requires CONSTRUCTED, resource PASS, an emitted certificate and its exact sealed hash. The antecedent failed; there is no verifier subprocess, receipt, CPU or mathematical verification result. Constructor and verifier are distinct stages, not comparable timing samples.

Inference

the independent completion joint is inconclusive. Retain the failed candidate and nonstart. This review did not independently execute LL and does not infer compositeness, an LL source defect or an impossibility result. A prime exponent alone does not establish Mersenne primality.

Limitation

known-CM compact representation remains separate from expanded rational maps. SEC2 p/n primality is trusted-standard, not a new self-contained proof. OS printed real0.40/user0.32/system0.01 seconds gives derived displayed CPU0.33 seconds for the constructor public command; canonical cpu_seconds:null remains. The old nonstart native_exit_code:0 is an initialized adapter value, not a native exit measurement.

Next action

independently review a fresh M44497 parameter packet against the primary GIMPS listing and unchanged e82 code; fresh constructor plus conditional fresh independent verifier required. No retry, LL fix, result or global-record claim is approved here.

Independent review TASK-20261016-66f447, exact report SHA25652d001abaf2e2aab1aeb169937ae8ba43c5460e6a71ad86ec74a8440a552ee19. Source e82; binary b3cbd6ac…61587b. All55 listed raw hashes match. Full identities, references and source boundaries: report.md and original run reports. Existing frontier and historical run graphs checked and left unchanged.
