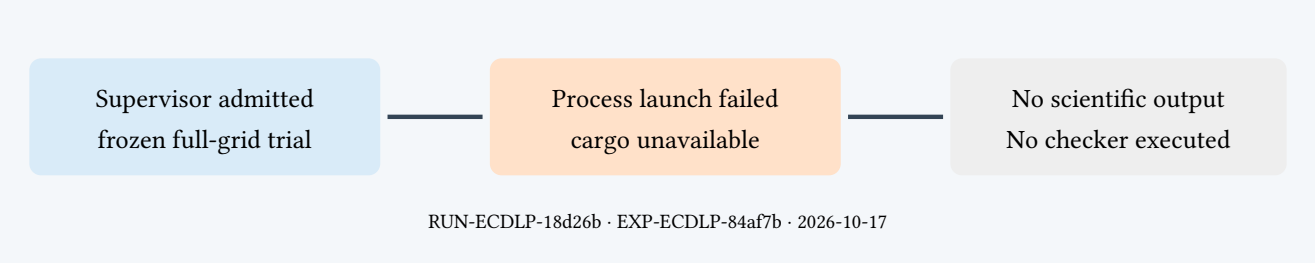
G1 full-grid launch attempt

Observations only. This report does not review the hypothesis or change any scientific status.


Experiment: EXP-ECDLP-84af7b; hypothesis: H-ECDLP-2f1033; goal: GOAL-ECDLP-001.
Run: RUN-ECDLP-18d26b. Source commit: 148c99cb3d39664d7cb6d41b9996c8f2fda3f602.
One frozen full-grid trial was requested. One attempt ended infrastructure_error before its scientific executable started.
No scientific cells or controls completed; checker return code is missing because the checker did not run.
Exact recorded error: [Errno 2] No such file or directory: 'cargo'.
Start: 2026-10-17T18:22:10.732781+00:00; finish: 2026-10-17T18:22:10.741149+00:00. CPU time and scientific timings are not available. Host detail beyond platform and Python is not recorded by this legacy supervisor; dirty-tree state is not recorded. Source digests are in environment.json. The run's command.txt records the full command, grid, seeds 1,2,3, controls and 14,400-second watchdog.
The diagram is used because there are no comparable scientific measurements. It depicts the recorded execution path, not a mathematical obstruction.
The failed run remains immutable. Installing the toolchain does not validate it. A retry needs a new immutable run identity and explicit additive authorization, with the original scientific parameters retained.
Artifacts: ../../runs/RUN-ECDLP-18d26b/ (execution-receipt.json, launch.json, command.txt, environment.json, stdout/stderr and empty checker logs). No raw-result.json or manifest.yaml was produced.
