Run report: EXP-ENDO-0e622b / RUN-ENDO-f461e9

Combined-route re-run with the input-format term charged. This report records observations only. It gives no verdict; the evidence review decides that.

Identity

- **Records:** experiment `EXP-ENDO-0e622b`, a replication of hypothesis `H-ENDO-f58749` under `DEC-20261016-4f3a1a` (replicate), with correction `CORR-20261016-ac9fc8`; approval `DEC-20261016-77dce3`; goal `GOAL-ENDO-001`.
- **Tasks:** executor `TASK-20261016-1b6023` (claimed, released `completed`); snapshot `TASK-20261016-85eb9e`.
- **Run directory:** `experiments/EXP-ENDO-0e622b/runs/RUN-ENDO-f461e9/`.
- **Code:** commit `f8c927854cc9ff6053238ee3ceaa1d109195cb50`, `repository_dirty: false` (harness only).
- **Timing:** started 2026-10-16T21:34:27Z; wall 75.5 s (measured).

What ran

- **Launcher:** `tools/experiment_execution.py run` on the frozen plan, which runs `python -m harness.endosweep.isoglv` with the frozen arguments of EXP-ENDO-7494e7.
- **Same inputs:** the same source rows (`0576225d…`) and the same two controls.
- **The one code change:** `input_format_cost` adds, to each combined route's one-shot cost, the cheaper of two evaluations of the GLV chain on the forward map's Jacobian image:
  - (a) the chain on the Jacobian input;
  - (b) E's chain on the affine P, then one more forward pass.
- **Outcome:** trials 1 requested, 1 completed; coverage `output_validated`. `check.py`: "ok: 9 rows, 0 with recorded errors"; it also fails if a combined route lacks the term.
- **Units:** modelled M_eq = M + S counts (curvesweep, S = 1 M). Gains are derived as 1 − arm / reference from recorded values.

Graph

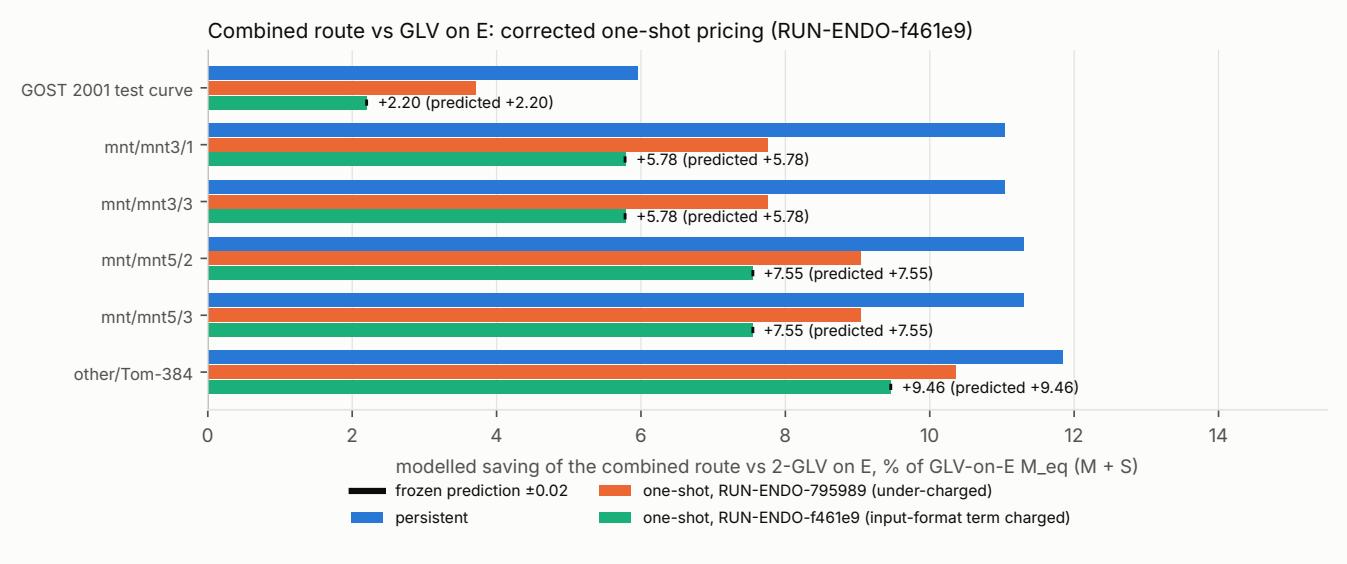

Figure 1: RUN-ENDO-f461e9, recorded rows, beside RUN-ENDO-795989's one-shot column and the frozen one-shot prediction (black, ±0.02 points). Single deterministic run; no spread.

Recorded values (combined route vs 2-GLV on E)

curve	input-format M_eq	evaluation charged	alternative	persistent	one-shot, RUN-ENDO-795989	one-shot, this run	frozen prediction
GOST 2001 test	32	E's chain on P, then forward	47	+5.955 %	+3.705 %	+2.204 %	+2.20 %
mnt/mnt3/1	29	chain on Jacobian input	32	+11.033 %	+7.760 %	+5.782 %	+5.78 %
mnt/mnt3/3	29	chain on Jacobian input	32	+11.033 %	+7.760 %	+5.782 %	+5.78 %
mnt/mnt5/2	32	E's chain on P, then forward	47	+11.302 %	+9.050 %	+7.549 %	+7.55 %
mnt/mnt5/3	32	E's chain on P, then forward	47	+11.302 %	+9.050 %	+7.549 %	+7.55 %
other/Tom-384	29	chain on Jacobian input	32	+11.844 %	+10.359 %	+9.463 %	+9.46 %

Other recorded observations

- **Combined nodes:** path and j are the same as RUN-ENDO-795989 on every row. All persistent figures are identical to RUN-ENDO-795989. Every combined route is verified on 8 scalars.
- **Combined route vs E's model, one-shot:** GOST +31.93 %, mnt3 +34.32 %, mnt5 +36.93 %, Tom-384 +40.61 %.
- **Controls:**
  - The ascent control reaches the j = 0 crater over one degree-11 step. Its input-format term is 0 (unit endomorphism), and its combined vs E's model is persistent +36.43 %, one-shot +32.57 %, as before.
  - mnt/mnt5/1 has 0 cheaper-class candidates and no combined route.
- **BADA55-VPR-224:** no $|D_K| \le 2 \cdot 10^6$, so no GLV arm.

Missing or out of scope

- No timing.
- No f_E certification for any neighbour. Route (b) relies on the edge being horizontal, which the independent validator checked in TASK-20261016-35d324 §A3; this run does not re-certify it.
- The six population rows are four isogeny classes.
- Peak memory is not recorded.
- The prediction was written after RUN-ENDO-795989 was seen (disclosed in DEC-20261016-77dce3).

Files

`plot.py` draws `oneshot.svg` from `runs/RUN-ENDO-f461e9/raw-result.json` and `../EXP-ENDO-7494e7/runs/RUN-ENDO-795989/raw-result.json` only.
