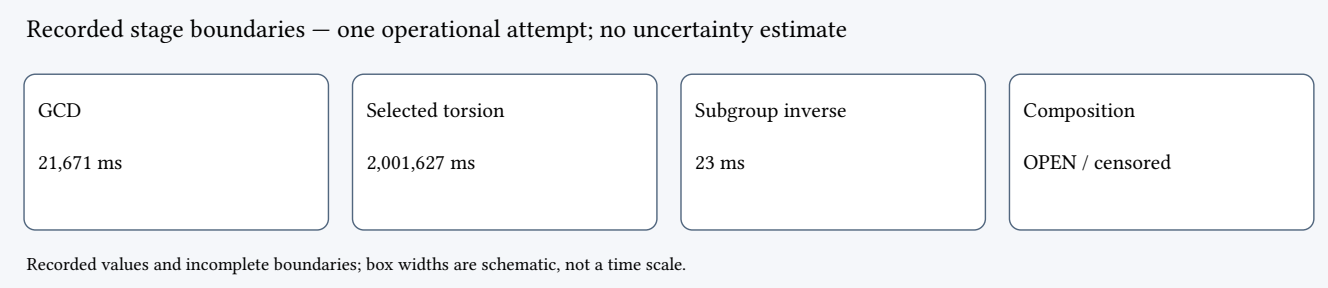
P-192 degree 50,341: independent review

EXP-ISOU-32a530 / DEC-20261016-30a54b / GOAL-ISOU-f30a07

Decision: revise the process. Evidence strength: bounded diagnostic. Claim tier: process revision; no EV promotion or lane closure.



Observation

RUN-ISOU-93b2b3 ended CENSORED/TIMEOUT at 3,600,033 ms, sampled peak RSS 250,052,608 bytes, no unavailable samples. The exact original map SHA25682e3951488c793c5901ecf1dfeb3ab072b7cda16730899330df7caa9832a170c was reused; one eigenline remains PARTIAL.

Comparison

nine stages have matching begin/end records. Kernel GCD 21,671 ms, selected torsion 2,001,627 ms and subgroup inverse23 ms are end-minus-begin wall differences (n=1, millisecond resolution; spread unavailable). Composition has a begin only; no completed duration or final replay score exists. Trace and public-command clocks have different origins.

Inference

the independent integrity joint holds only for these bytes, nesting and bounded resource/trace observations. This supports process revision, not map admission, a bottleneck ranking across all phases or a speedup. No paired A/A control exists and the host was shared.

Limitation

all downstream map and point predicates remain unfinished. OS printed real3600.05/user1716.81/system62.75 seconds gives derived displayed CPU1779.56 seconds for the public command and accounted children, not per-stage or complete campaign cost. Original canonical cpu_seconds:null is preserved.

Next action

separate reviewed fresh compact candidate, followed by the already proposed source-only fixed-modulus investigation; no larger expanded-map construction is approved by this decision.

Independent review TASK-20261016-66f447, exact report SHA25652d001abaf2e2aab1aeb169937ae8ba43c5460e6a71ad86ec74a8440a552ee19. Source e82; binary b3cbd6ac…61587b. All55 listed raw hashes match. Full identities, references and source boundaries: report.md and original run reports. Existing frontier and historical run graphs checked and left unchanged.
