Run report: EXP-ICPERF-e467a5

This report records what ran and what it measured. It is generated by tools/runbook.py from the session journal. It states no verdict, support, weakening or significance; the evidence review does that.

- Runbook: experiments/EXP-ICPERF-e467a5/runbook.yaml (sha256 229f641d4134cc6516b68835287991b0f9085339fb3f195660cc619a87bc96ee)

Purpose

One deterministic trial computes the reduced Bernstein-Lange price ratio and the online ratios at three frozen (r, A) cells. Observations only. The n=83 host arm is not an input.

Steps

step	status	what it does
S01-probe-python	passed	Writes the CPython major version to environment.json in this step output directory.
S02-trials	failed	Runs run.py then check.py for the single frozen trial in its own write-once directory.

Units

0 valid of 1; invalid: ['price-ratio-identity']

trial	run	receipt status	valid
price-ratio-identity	RUN-ICPERF-943efa	not_run	False

Metrics

Each value is computed by tools/runbook.py from the recorded outputs named in its source. Labels say whether a value was measured or derived from measured values.

metric	label	unit	n	values
price_ratio_num	measured	count	0	max=null, min=null
ratios_agree	measured	fraction	0	fraction_true=null

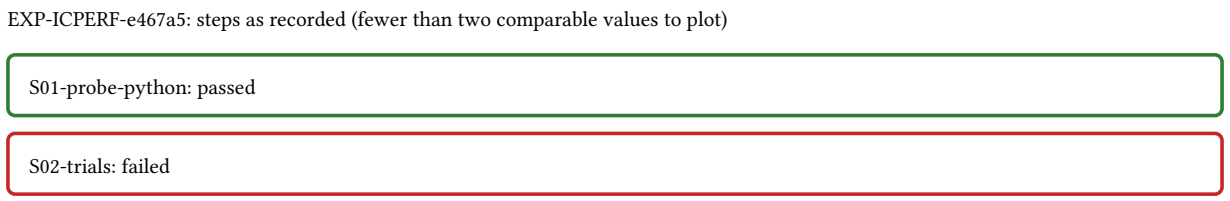

Figure 1: Recorded values from this session only; no new computation.

Validity, proofs and formal obligations

- Execution validity: incomplete
- Control validity: not_applicable
- Inferential validity: not_assessed: review-evidence and the Coordinator decide
- Execution proofs: {"chain": "incomplete: docs/execution-proof-chain.md milestones are open", "failed_units": 0, "unavailable_units": 0, "verified_units": 0}
- Audit: not audited: tools/runbook.py audit (audit-runs skill)

Where it stopped

S02-trials: infrastructure_error: supervisor exit 2 (impediment: the supervisor refused to launch); see experiments/EXP-ICPERF-e467a5/runbook-sessions/RBS-ICPERF-b7e41c/steps/S02-trials.attempt-1.supervisor.stderr

A stop is an operational fact. It is not evidence about the hypothesis.
